sink and tossed the can into the trash receptacle. "But the fact is that Dr. Doom would never touch me." "See, there's that anger again." "Do him good too," Sirocco declared. "Then they might make him an engineer. But you'll have a hard time. He's holding out till he's found out what the talent's like on Chiron." "It has to. You can't love others until you love yourself. I was sixteen when I joined the Circle, seven. With two types of component or anticomponent to choose from for each triplet, a triplet could comprise either three of a kind of one type, or two of one kind plus one of the other. In the latter case there were three possible permutations of every two-plus-one combination, which yielded the three color charges carried by quarks. The three-of-a-kind combinations could be arranged in only one way and corresponded to leptons, which was why leptons could not carry a color charge and did not react to the strong nuclear force. Lesley accepted automatically and found himself looking at the features of Colonel Oordsen, one of Stormbel's staff, looking grim faced and determined, but visibly shaken. "Activate the intruder defenses, close the inner and outer locks, and have the guard stand to, Major," he ordered. "Any attempted entry from the Spindle before the locks are closed is to be opposed with maximum force. Report back to me as soon as the bulkhead has been secured, and in any case not later than in five minutes. Is that understood?" any lesser person. Surely not. She is majestic. She is magnificent, beautiful. She can live by her own rules, that had stuck to her skin. "I bet he did," Marie declared. "I'm not a cripple." Curtis Hammond, the original, might have allowed her to have juice in the past. The current Curtis Colman nodded. "To start with, anyhow. Then, I guess, it's a case of how well you make out. You know how things operate here." After a pause he asked, "How about you?" All but incapable of being overfed, he consumes the remaining hot dogs once he senses that Old Yeller is. Pernak rose from the desk at which he had been working, and moved over to the window to gaze down at the lawns between the two arms that formed the front wings of the building. A lot of staff and students were beginning to appear, some lounging and relaxing in the sun and others playing games in groups here and there as the midday break approached. He was used to living among people who expressed feelings of insignificance and fear of a universe which they perceived as cold and empty, dominated by forces of disintegration, decay, and ultimately death—a universe in which the fragile oddity called life could cling precariously and only for a fleeting moment to a freak existence that had no rightful place within the scheme of things. Science had probed to the beginnings of all there was to know, and such was the bleak answer that had been found written. "Power. If you have enough power, you can bring even the richest men to their knees." After a while, Geneva said, "Leilani's not the only child I was talking about a moment ago." "I know." One more blot. You didn't want slippery hands in a slippery situation. Her voice wasn't full of money, no disdain or evidence of tutor-shaped enunciation, but rich with quiet. The open doors revealed a large TV screen. Swyley was looking distant and thoughtful behind the thick spectacles that turned his eyes into poached eggs and made the thought of his being specially tested for exceptional visual abilities incongruous. He was wondering how useful Stanislaw's nefarious skills might be for inserting a few plus-points into his own record in the Military's administrative computer, but couldn't really say anything about the idea in Sirocco's presence. There was such a thing as being too presumptuous. He would talk to Stanislaw privately, he decided. because everyone fears that these two are federal immigration agents, rousting illegal aliens? of which. "It pays to have friends," Colman grunted. "The woman is a menace." "We'll work out something. Where and when?" Hanlon said. Colman looked over at Veronica. He's just entering the next aisle, one layer deeper into the huge kitchen, when he hears the two cowboys. to be using Chironian labor with no references appearing in their books; every business became convinced that its competitors were cheating, and before long every session of both houses of Congress had degenerated into a bedlam of accusations and counteraccusations of illegal profiteering, back-door dealing, scabbing, and every form of skullduggery imaginable. that sooner or later will draw his pursuers. beyond the next door, he finds logic rewarded. Strangely, it was this very grasp that he was beginning to acquire of the Chironians' dedication to life that troubled Pernak. It troubled him because the more he discovered of their history and their ways, the more he came to understand how tenaciously and ferociously they would defend their freedom to express that dedication. They defended it individually, and he was unable to imagine that they would not defend it with just as much determination collectively. They had known for well over twenty years that the Mayflower ii was coming, and beneath their casual geniality they were anything but a passive, submissive race who would trust their future to chance and the better nature of others. They were realists, and Pernak was convinced that they would have prepared themselves to meet the worst that the situation might entail. Although nobody had ever mentioned weapons to him, from what he was beginning to see of Chironian sciences, their means of meeting the worst could well be very potent indeed. "Is it?" Geneva still leaned forward. The slow unsynchronized throbbing of the candle flames cast an. Slam the door. Throw shut the locks, the bars, the bolts. winning. This exhausted silence was the closest thing that Noah knew to peace. A few times in the past, he had in. As Director of Liaison, Kalens headed the diplomatic team charged with initiating relationships with the Chironian leaders and was primarily responsible for planning the policies that would progressively bring the colony into a Terran-dominated, nominally joint government in the months following planetfall. Hence the question probably concerned him more than anybody else. Kalens took a moment to compose his long, meticulously groomed and attired frame, with its elegant crown of flowing, silvery hair, and then replied. "I agree with John that a rigid rule needs to be asserted early on . . . possibly it could be relaxed somewhat later after the Chironians have come round. However, Mark has a point too. We should avoid the risk of hostilities if we can, and think of it only as a last resort. We're going to need those resources working for us, not against. And they're still very thin. We can't permit them to be frittered away or destroyed. Perhaps the mere threat of force would be sufficient to attain our ends --without taking it as far as an open demonstration or resorting to clamping down martial law as a first measure." As the Mayflower II wheeled slowly in space high above Chiron, the outer door of Shuttle Bay 6 on the Vandenberg module separated into four sectors which swung apart like the petals of an enormous metal flower to expose the nose of the surface lander nestling within. After a short delay, the shuttle fell suddenly away under the rotational impetus of its mother-ship, and thirty seconds later fired its engines to come round onto a course that would take it to the Kuan-yin, orbiting ten thousand miles below. "Is that the possibility of violent reaction from the Chironians cannot be dismissed. Therefore we must allow for such an eventuality in considering the future." "Well, I'm pleased to hear that at least one Terran thinks so," Bobby said. "That man who was talking in town the other day about invisible somethings in the sky, saying it was wrong to have babies didn't seem to. He said we'd suffer forever after we were dead. How can he know? He's never been dead, it was ridiculous." sand, across loose shale, between masses of sage and weather-sculpted thrusts of rock, zigging and brush and bramble ahead. When he'd met her two weeks ago, Noah Farrel had disliked this woman on first sight, strictly as a. Pernak shrugged. "Just let the system die naturally." The farmhouse is silent, and the finger-filtered beam of the flashlight reveals no one in the upstairs hall. The process had been the same all through history, and it was happening again. The latest four-year-old news from Earth described the rapid escalation of the latest war against the New Israel of the South. Only this time the EAF was getting involved. The Western strategists had interpreted it as an EAF policy to provoke an all-out war all across Africa so they could move in afterward and dose up on Europe from the south. Apparently the idea was to try and take over the whole landmass of Asia, Africa, and Europe. Why did they want to take over the whole of Asia, Africa, and Europe? Colman didn't know. He was pretty sure that most of the people killing each other back there didn't want the territory and didn't care all that much who had it. The Howard Kalenses were the ones who wanted it, just as they wanted everything else. Perhaps if they'd learn how to get along with people without being scared to turn their backs all the time and how to make love with their own wives in bed, they wouldn't need geographical conquests. And yet they could tell everybody it made them better than the people were, and the people believed it. grassy scent overlays the more subtle smell of rich, raw soil. She didn't have. "I don't get your attitude." Repenting its larceny, the cloud surrendered the stolen moon, and Sinsemilla raised her slender arms. "Think of it like the phase-changes that describe transitions between solids, liquids, and gases," Pernak said. "The gas laws are only valid over a certain limited range. If you try to extrapolate them too far, you get crazy results, such as the volume reducing to zero or something like that. In reality it doesn't happen because the gas turns into a liquid before you get there, and a qualitatively different kind of behavior sets in with its own, new rules." Sometimes, from the side windows, depending on the encroaching landscape, they are able to see the. Pernak knotted his brow, pursed his lips, then stretched them back to reveal his teeth. "Then those people should look after their own future instead of waiting for someone else to work it out for them. That's the old way. They have to learn to think the Chironian way." After a second of hesitation he added, '~that's what Eve and I are going to do. The features behind the other's visor remained unsmiling. "Mister Fallows to you, Sergeant." The voice was icy. "I'm sorry, but I have work to do. I presume you have as, well. Might I suggest that we both get on with it." "That's okay," Colman said. "We just have to take some measurements." Without waiting for a reply he

walked over to the door, opened it, poked his head in, called back to Stanislaw, "This is it. Where's Johnson?" and went inside. Stanislaw put down the toolbox and followed, then Colman came back out and squatted down to rummage inside it for something. Veronica appeared and went in with the packing roll, Stanislaw came out, Colman went back in with a measure, and a few yards away along the corridor Carson and Maddock managed to get the picture-crate stuck across an awkward corner. While the SD was half watching them, Fuller came up the stair to ask where Johnson was, Stanislaw waved in the direction of the doorway, and Fuller went in while Colman came out. Carson dropped his end. "But doesn't this kind of thing upset the kids when it happens?" Hanlon had asked uneasily. Leilani to say, "Old Sinsemilla," and that drew Micky to the open back door of the trailer. "Luck," Micky clarified. "The angle of the shot was severe. The slug literally ricocheted off her skull. A hand slid across his mouth from behind, and he was quickly whisked into the still-room next to the pantry. An arm held him in an iron grip while a soldier in battledress scooped the trolley in from the corridor and closed the door. There were more of them in there, with a civilian. They looked mean and in no mood for fooling around. Rastus looked puzzled. "There's a whole galaxy out there, and a few billion more beyond that," he said. "It'll take a long time for it to get crowded. Europe used to run on wood and that was finite, but nobody worries about it today because they're into smarter things." He shrugged. "It's the same with everything else. The human mind is an infinite resource, and that's all you need." He wheels around, facing the way that he came, ready to brain the first of them with the juice container. "We could probably arrange a visit for you too," Chang offered. "But, sweetie, I remember so clearly . . . the wonderful satisfaction of shooting him." Nobody talked any more about annexing Franklin. Howard Kalens's chances of being elected to perpetuate the farce plummeted to as near zero as made no difference, and Paul Lechat, recognizing what he saw as a preview of the inevitable, dropped his insistence for a repeat performance in Iberia; at least, that was the reason he offered publicly. Ironically, the Integrationist, Ramisson, emerged as the only candidate with a platform likely to attract a majority view, but that was merely in theory because his potential supporters had a tendency to evaporate as soon as they were converted. But it was becoming obvious as the election date approached that serious interest was receding toward the vanishing point, and even the campaign speeches turned into halfhearted rituals being performed largely, as their deliverers knew, for the benefit of bored studio technicians and indifferent cameras. The Lion-yin's lower orbit put it out of synchronism with the Mayflower 11 and resulted in the two vessels being shielded from each other by Chiron's mass for a period of thirty-two minutes every three-and-a-quarter hours. The sixteen Devastator missiles would be launched from the Battle Module while the Mayflower II was screened from the Kuan-yin's retaliatory fire. One salvo would be programmed to follow planet-grazing courses that would bring them up low and fast from points

all around Chiron's rim, while the second salvo, launched a few minutes earlier, would swing wide and out into space to come back in at the Kuan-yin from various directions at the rear, the flights being timed so that they all converged upon the Chironian weapon simultaneously. A mass the size of the Kuan-yin could not maneuver rapidly, and the worst-case simulations run on the computers had shown an overwhelming margin in favor of the attack, whatever. He grinned at the joke as he, turned to lead the way. Farnhill didn't seem to appreciate the humor.- At that moment a local alarm sounded inside the command post. Within seconds the sounds of men running to stations came from the passageways and stain to the rear. One of the duty crew was already flipping switches to collect report summaries, and Chazure got up to go to the outer observation room just as the Watch Officer appeared in the doorway from the other side.
