A highly depressing idea, but he did not on that account roll out the console to select a remedy from the menu. He knew from long experience that whatever could make him palpably happier was also liable to send him into a state of fugue in which conversation in the linear sense became next to impossible. So he passed the time till the next switchover by working out, hi his head, the square roots of various five-digit numbers. Then, when he had a solution, he'd check it on his calculator. It had sort of a pale, blurred look in the starlight, the six completed stages blending together, the uncompleted seventh one softly serrated against the night sky. Working on it every day, I've kind of forgot how high it is, how much higher it's going to be when we get back on the job. The highest thing ever, they say. I won't dispute that. The design could not feasibly be modified at this late stage. Too many things would have to be thought out again from the beginning, and such a task would require decades. And yet, nothing comparable to SP3 is anywhere near as advanced a stage of design at the present time, let alone near being constructed.
