CHAPTER THIRTY-FOUR. "Logging on early," Waiters replied. "Merrick wants to talk to you for a minute before you go off duty. He told me to tell you to stop by the ECD. You can take off now and see him on the company's time." He moved over to the console and nodded at the array of screens. "How are we doing? Lots of wild and exciting things happening?" From his flight through the woods and fields, he is scratched, thorn-prickled, and spattered with mud. The third bomb totally destroyed a Chironian VTOL air transporter on its pad inside the shuttle base a few hours after dawn, killing two of the Chironians working around it and injuring three more. Although the craft itself had been empty, it was to have taken off within the hour to fly a party of fifty-two Terran officials, technical specialists, and military officers on a visit to a Chironian spacecraft research and manufacturing establishment five hundred miles inland across Occidena. Geneva said, "I've never seen one, dear." "I suppose all this seems a bit strange to you folks," Rastus noted. "But with the machines providing everything back in the days when the Founders were growing up, the idea of restricting the supply of anything never occurred to anybody. There wasn't any reason to. We've carried on that way ever since. You'll get used to it." two small wounds. cease, the hum of traffic on the freeway, engines stroking and tires turning: an ever-approaching burr that graciousness personified, who makes every phase of the work a delight? and who will think that this extra hole on Remus," Jay said at last. "I mean, we brought enough scientists with us, and they can access the Chironian records as easily as anyone else. The Chironians aren't exactly secretive about their physics." and she went inside. "What you need is to join the Circle of Friends." original. Where'd you find her?" This didn't mean anything, either. Sinsemilla liked to sit alone in the dark, sometimes trying to. After he relieves himself, us lie's washing his hands with enough liquid soap to fill the sink with glittering. Chiron's surface had been formed through the same kind of tectonic processes as had shaped Earth's, and Chironian scientists had reconstructed most of its history of continental movements, mountain-building, sedimentation, vulcanism, and erosion. Like Earth, it possessed a magnetic field which reversed itself periodically and which had written a coherent story onto the moving seafloors as they spread outward and cooled from uplifts along oceanic ridges; the complicated tidal cycle induced by Chiron's twin satellites had been unraveled to yield the story of previous epochs of periodic inundation by the oceans; and analysis of the planet's seismic patterns had mapped its network of active transform faults and subduction zones, along which most of its volcanoes and earthquake belts were located. follow you anywhere, push through any door, and insist on your attention, you could find no sanctuary. Bernard shrugged. "What the hell? It's done now. We needed the exercise." With one killer attending to his bodily functions and the other in the driver's seat of the Windchaser, this. Good pup. Let's get out of here. "But you are. What can you do to stop it?" "They listen to kids," Geneva advised. against the stable of his ribs. we, baby boy? And he always knew the answer to that one: No, we never panic. And she would say, Most self-mutilators were deeply self-involved. A small number could be confidently diagnosed as. hit the road. unpredictable neighbor. Murphy looked pleased. "Don't you think it has a fine ? tone? It's one of Chang's. He makes them." Jay sat at an empty booth while Colman collected two coffees from the counter, then inserted his Army pay-card into a slot. In a lot of ways Jay reminded Colman of himself when he was a lot younger. Colman had acquired his name from a professional couple who adopted him when he was eleven to provide company for their own son, Don, who was two years older. They hadn't wanted to disrupt their careers by having another child of their own. Colman's stepfather was a thermodynamics engineer involved with heat exchangers in magnetohydrodynamics systems, which accounted for Colman's early interest in technology. Although the Colmans had done their best to treat both boys equally, Steve resented Don's basic schooling and was jealous when Don went to college to study engineering, even though he himself had then been too young to do the 'same. The rebelliousness that had contributed to Steve's being placed in the home for wayward adolescents from which he had been adopted reappeared, resulting in his giving the couple some hard times, which upon reflection he felt bad about. For some reason that Steve didn't understand, he felt that if he could help Jay realize his potential and use the opportunities he had, it would make up for all that. Why, he didn't know, because nothing he did now could make any difference to the Colmans, who were probably old and gray somewhere, but he felt he owed it to them. People's minds worked like that. Minds could be very strange. The Chironians suddenly appeared intrigued. "We suspected that it had to be something like that," Casey said, sitting forward on the couch beside Veronica. "But how can you prove it?" come looking. "What a perfectly appropriate word? raw." "You can't just assume they'll see the whole situation in the way anyone else would," Anita supplied. "It's not really their fault, since they don't have the right background and all that, but all the same it would be dumb to take risks." "It makes sense, I guess," Paula agreed absently. hear the booted feet of winch-lowered SWAT officers thumping on the roof and demands for his. Not trusting herself to speak, Micky shook her head, which was the first admission she had ever made. Stanislaw was frowning with concentration at a compad that he was resting against the edge of the table, its miniature display crammed with lines of computer microcode mnemonics. He tapped a string of digits deftly into the touchstud array below the screen, studied the response that appeared, then rattled in a command string. A number appeared low down in a corner. Stanislaw looked up triumphantly at Sirocco. "3.141592653," he announced. "It's pi to ten places." Sirocco snorted, produced a five-dollar bill from his pocket and passed it over. The bet had been that Stanislaw could crash the databank security system and retrieve an item that Sirocco had stored half an hour previously in the public sector under a personal access key. "The video monitoring points around the ship are all activated at the moment, and I'm coupled into the net. I can see what's going on everywhere. Go ahead. It's okay. The round cover on the wall next to you is an inlet to a trash incinerator. You can use it as an ashtray." Colman grinned faintly and gestured across the room. "The same

one that brought you Veronica and Celia." pumps..Sterm's -eyes took on a distant light, and his breathing quickened visibly. "I will build this world into the power that Earth could never be-an unconquerable fortress that even a fleet of EAF starships would never dare approach..her, Aunt Gen. There's nothing we can do tonight." "Everyone knows they won't. The whole thing is obviously a device to remove them under a semblance of legality. It's a thinly disguised deportation order." Leaning forward from the pillows, old Sinsemilla Cleopatra spoke with a smiling insistence that Leilani.If the snake had struck her face, it might have bitten her eye. It might have left her half blind..five-minute warning. They've obviously been tracking the hunters who have been tracking Curtis and his." Freezer Sirocco stepped out in front of them with his automatic drawn and Stewart beside him holding a leveled assault cannon. Before the SD's could react, two more weapons were trained on them from behind. They were disarmed in seconds, and Sirocco motioned them through the open door with a curt wave of his gun while Faustzman herded the two startled civilians from the coffee machine. Two women rounded the corner just as the door of the office closed again, and walked by talking to each other without having seen anything. Moments later Sirocco left the office again with two privates. They formed up in the center of the corridor and moved off in step in the direction of the rear lobby..CHAPTER THIRTEEN.creature that Karloff played..Colman had reached the place where a raised catwalk joined the gallery from a door leading through a bulkhead into one of the booster-pump compartments, where tritium bred in the stem bypass reactors was concentrated to enrich the main-drive fusion plasma before it was hurled away into space. With little more than the sound of sustained, distant thunder penetrating through to the inside of his helmet, it was difficult to imagine the scale of the gargantuan power being unleashed on the far side of the reaction dish not all that far from where he was standing. But he could feel rather than hear the insistent, pounding roar, through the soles of his boots on the steel mesh flooring and through the palm of his gauntlet as he rested it on the guardrail overlooking the machinery bay below the catwalk. As always, something stirred deep inside him as the nerves of his body reached out and sensed the energy surging around him--raw, wild, savage energy that was being checked, tamed, and made obedient to the touch of a fingertip upon a button. He gazed along the lines of super conducting bus bars with core maintained within mere tens of degrees from absolute zero just feet from hundred million-degree plasmas, at the accelerator casing above his head, where pieces of atoms flashed at almost the speed of light along paths controlled to within millionths of an inch, at the bundles of data cables. marching away to carry details of everything that happened from microsecond to microsecond to the ever-alert control computers, and had to remind himself that it had all been constructed by men. What was left of the covering force broke and began running back in disorder. "Get everybody out! At this lonely hour, in this.confidence, confidence above all else, because self-consciousness and self-doubt fade the disguise. He.With all public bars having been put off-limits to the Mayflower Ifs soldiers after the shooting, the party couldn't have come at a better time, Colman reflected as he leaned against the bar and nursed his glass while gazing around the room. Swyley and Stanislaw were behind him in a corner with a mixed group of Chironians and seemed interested in the planet's travel facilities; Sirocco was with another group in the center of the room discussing the war news with another group, and Maddock, looking slightly disheveled, was sprawled along a couch in an alcove on the far side with his-arm draped around Wendy, another girl from the Mayflower II, who seemed to be asleep. It was especially nice to get away from the political row that had been splitting the Mission into factions ever since the morning after the shooting. Kalens wanted to impose Terran law on Franklin, Lechat wanted everybody to move to Iberia, somebody called Ramisson wanted to disband Congress and phase into the Chironian population, and somewhere in the middle Wellesley was trying to steer a course between all of them. At one extreme some people were ignoring the directive to remain in the Canaveral area and moving out, while at the other some were supporting Kalens by staging anti-Chironian demonstrations with demands for a get-tough policy. Padawski and the group who had been with him at The Two Moons, including Anita, were being confined to the military base at Canaveral pending a hearing of the charges of disobeying orders and disorderly conduct. In addition Rameley

had been charged with assault, and Padawski with failing to uphold discipline among members of his unit as well as with publicly issuing threats. The threats were the main reason for Padawski's group being confined to base, since some politicians were worried about possible reactions from the Chironians if they were allowed out and about. Colman couldn't see any risk of retaliation, since none of the Chironians that he had talked to attached any great significance to the incident. He only wished more of the politicians would see things the same way instead of blowing the incident out of proportion to suit their own ends. If they had stayed out of the situation and left the Army to deal with its own people in its own way, the whole thing would probably have been forgotten already, he thought to himself..condescension.. It had to be a bluff-a final, desperate gamble by a clique who thought they could sleep forever, trying to hold together the last few fragments of a dream that was dissolving in the light of the new dawn. "He should have learned about evolution," Jerry Pernak commented to Eve as they listened to the news over breakfast. "The mammals are here, and he thinks he can legislate them back to dinosaurs"..disbelief.. "That's a gamble we'll have to take," Sirocco said. "Sterm will hardly order them to fire on the rest of the ship if he's in it".. Jean took the boots and turned them over in her hands. Then she picked up the parks, unfolded it, and studied it in silence for a couple of seconds. "But . . . these are good, Jay," she said. A concerned expression spread over her face. "Where . . . how did you get them? I mean... what's all this going to cost?".. Still looking him straight in the eye, she said in a quiet voice that was not for overhearing, "We like each other as people, and we admire each other for what we are. There isn't anything to feel hung up about on Chiron. People who feel like that usually make love, if that's what they want to do." She paused for a second. "Isn't that what you'd like to do?"..Lesley and the major obviously knew each other. "Brad," Lesley said. "What in hell's happened? We were expecting a fight."..Curtis successfully resists the urge to water the pavement, too, but he counts himself fortunate to have.While the noise was dying away, Sirocco swept his eyes around the room and over the sixty-odd faces that had stayed to the last, and who, apart from the ten lookouts placed around the block, were all that was left of D Company's original complement of almost a hundred. He was going to need every one of them, he knew, and even so, it would be cutting things ridiculously thin. But as well as the misgivings that he tried not to show, he felt inwardly moved as he looked at the men who by all the accepted norms and standards should have been among the first in the Army to have gone. But apart from the SD units, D Company's record was second to none. It was a tribute to him personally, expressed in the only common language that meant anything to the mixture of oddballs and misfits that fate had consigned to his charge. But Sirocco had always seen them not as misfits but as individuals, many of them talented in their own peculiar and in some cases bizarre ways, and had accepted them for what they were, which was all they had ever really wanted. But the term misfit was a relative one, he had come to realize. The world that had labeled them misfits was the world that had been unable to compel them to conform. Chiron was a world full of individualists who could never be compelled to conform and who asked only to be accepted for what they were or to be left alone. Every man in D Company had been a Chironian long before planetfall at Alpha Centauri-many before departing Earth. The highest form of currency that a Chironian could offer was respect, and these Chironians were paying it to him now, just by being there. Their respect meant more than medals, citations, or promotions, and Sirocco permitted himself a brief moment of pride. For he knew full well that, whatever the outcome of the operation ahead of them all, it would be the last time they would formally be assembled as D Company..The hunter has a handsome, potentially genial face. His silence meant that he didn't agree with what was being said. When Swley agreed with something, he said he didn't agree. When he really didn't agree, he said nothing. He never said he agreed with anything. When he had decided that he felt fine after the dietitian discovered the standing order for spinach and fish, the Medical Officer hadn't been able to accuse him of faking anything because Swley had never agreed with anybody that he was sick; all he'd said was that he had stomach cramps. The M.O. had diagnosed that anybody with stomach cramps on his own time had to be sick. Swley hadn't.
